

## Project-2 submission

1. Your Project-2 submission should include at least two files. The first is your program (file.py) and the second is documentation. The documentation should describe your program and mention the accuracy you obtain in your experiments.
2. Please submit your project-2 files in a zip file. The name of the zip file should be your netid.
3. Your program should be a python3 script, with the extension “.py”. We will run it by typing “python3 file.py”. Do not submit interactive notebook files such as those with the extension “.ipynb”.
4. As mentioned in class you are allowed to use any available TensorFlow / Python code. The only limitation is that your program should not require installation of special packages. If it does, it will not be graded.
